- jQuery Migrate 3.1.0
- jQuery UI 1.12.1
- Modernizr

- Moment.js 2.23.0

- DataTables

- Select2

- Lodash 3.1.0

INSTALLATION

OnTrack is been made to be very easy to install.Just make sure your Apache server version is 5 or above else it would run smoothly in for you.

- After downloading the zip file, extract it and copy it to your web directory

- Create database "ontrack" .Please make sure the database is spelled correctly else you would have issues.

- In the database folder, Import the SQL file into your database.If not you would have to create the tables manually which would take a lot of time.

- After you have successfully imported your database, open a new tab in the browser and go to your web address if you are on localhost, go to http://localhost/ontrack/

- After the above has been done properly, you should see the login page when you go to the address.

- Refer to the logins.text file for the credential to login into the application.
